

BALLS CASTING SIMULATION AND PRACTICE FOR HADFIELD STEEL

MARTA, C.; DOROFTEI, I.; PRISACARU, G.; HAMAT, C.;
SUCIU, L. & ZGARDEA, E.

Abstract: *Starting from the fact that the austenitic manganese steel casting (OAM) into ball shapes is difficult, as the pipe cavity is placed at the ball's surface or very close, we focused our research on the positioning of the casting defect into the ball's interior and as close as possible to the core. We performed simulations on the balls casting, and based on the simulation results we created the casting technology for 12-ball shapes, also presenting the practical results of the casting, which are almost identical to those of the simulation*

Key words: *austenitic, manganese, steel, casting, simulation*
