

PRODUCTIVITY IMPROVEMENT THROUGH MONITORING OF HUMAN RESOURCES COMPETENCE LEVEL

OTTO, T.; RIIVES, J. & LOUN, K.

Abstract: *The proposed model is capable of monitoring the quality and quantity of technological resources in machine-building enterprises of the network. Factors as equipment, work organization tools, and human resources were viewed and taken into consideration all together and in balance. Influence of human resources can be evaluated successfully when using proper taxonomy and expert estimations. The described methodology of human resources development has been thoroughly tested in different institutions.*

Key words: *Productivity, Human resource management, Advisory system, Database*
